

PERIMETER - PERIMETER

ETER - PERIMETER

a) Find the **perimeter** of this rectangle tile:

b) What is the **perimeter** when **two of these tiles** are put together?

A large empty white box with an orange border, intended for the student to write their answer to question b).

Compound shapes

6cm

4cm

Made up of more than one rectangle

Small rectangle:

Perimeter =

6cm

10cm

Large rectangle:

Perimeter =

Compound shapes

Made up of more than one rectangle

Small rectangle:
Perimeter = 20cm

Large rectangle:
Perimeter = 32cm

Compound shapes

Made up of more than one rectangle

Small rectangle:
Perimeter = 20cm

Large rectangle:
Perimeter = 32cm

Compound shapes

Made up of more than one rectangle

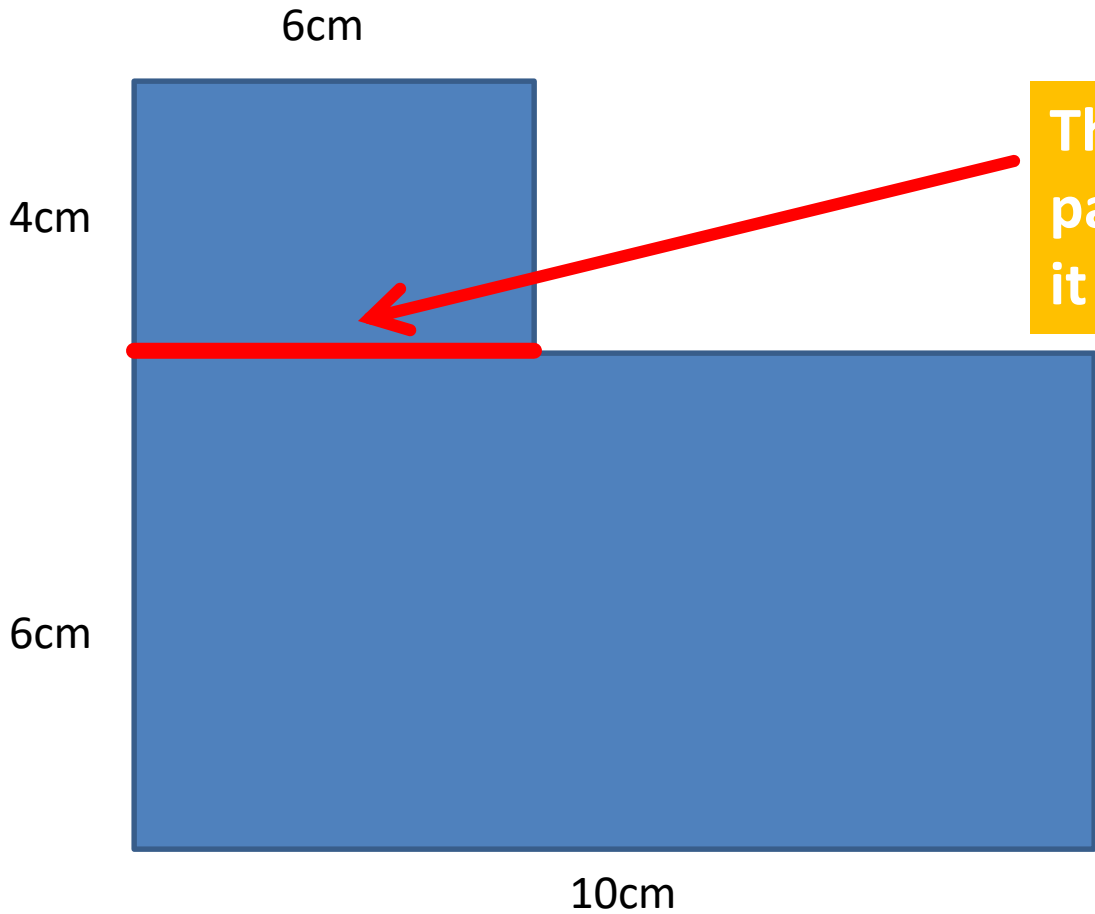

Small rectangle:
Perimeter = ~~20cm~~

Large rectangle:
Perimeter = ~~32cm~~

Compound shapes

Made up of more than one rectangle

This red line is no longer part of the perimeter as it is **INSIDE** the shape.

Compound shapes

Made up of more than one rectangle

This red line is no longer part of the perimeter as it is **INSIDE** the shape.

It was the 6cm of the small rectangle.

Compound shapes

Made up of more than one rectangle

This red line is no longer part of the perimeter as it is **INSIDE** the shape.

It was the 6cm of the small rectangle.

But now it is 10cm take away the 6cm that are inside!

Compound shapes

Made up of more than one rectangle

Opposite sides are the same length.

Compound shapes

Made up of more than one rectangle

New perimeter =
 $6\text{cm} + 4\text{cm} + 4\text{cm} +$
 $6\text{cm} + 10\text{cm} + 6\text{cm} +$
 $4\text{cm} =$

Compound shapes

Made up of more than one rectangle

New perimeter =
 $6\text{cm} + 4\text{cm} + 4\text{cm} + 6\text{cm} + 10\text{cm} + 6\text{cm} + 4\text{cm} = 40\text{cm}$
